WEBSITE PROJECT PROPOSAL REPORT

NANDO'S SOUTH AFRICA

A brief history of Nando's South Africa

Nando's is a South African restaurant brand that specializes in flame-grilled chicken seasoned with its distinctive PERi-PERi sauce. The organization began in 1987 when Fernando Duarte introduced his friend Robbie Brozin to PERi-PERi-marinated chicken at a Portuguese restaurant in Rosettenville, Johannesburg. The experience inspired them to establish the first Nando's restaurant, creating the foundation for a brand that would later expand internationally (Nando's South Africa, 2026).

PERi-PERi is central to Nando's identity. The company explains that African Bird's Eye Chilies, traditionally associated with Southeast Africa, form an important part of its PERi-PERi flavor. The sauce combines the chili with ingredients such as lemon, garlic and spices (Nando's South Africa, 2026).

Nando's has developed a strong brand identity based on its South African and Afro-Portuguese heritage. Its restaurants incorporate earthy colours, textures and locally inspired artwork, creating a distinctive dining environment (Nando's South Africa, 2026).

Mission and vision

Nando's focuses on providing customers with a distinctive dining experience centered around flame-grilled PERi-PERi chicken, quality food and a welcoming atmosphere. The organization also places emphasis on its people, teamwork and creating a positive workplace culture (Nando's South Africa, 2026).

For the proposed website project, the following mission statement can be used:

Mission:

To provide customers with delicious flame-grilled PERi-PERi food while delivering a welcoming, enjoyable and uniquely South African dining experience.

Vision:

To remain a distinctive global restaurant brand that celebrates its South African roots, PERi-PERi culture, creativity and memorable customer experiences.

Target Audience

Nando's has a broad target audience because its products appeal to different groups of customers. The proposed website will target:

- Young adults and students.
- Working professionals.
- Families.
- Friends and social groups.
- Customers who enjoy spicy and grilled food.
- Customers are looking for takeaway and delivery options.
- Existing Nando's customers.
- Customers are interested in promotions and loyalty rewards.

The website should therefore be accessible to users with different levels of technical ability and should provide information quickly and clearly.

Website goals and objectives

The main goal of the proposed Nando's website is to provide customers with an attractive, informative and easy-to-use digital platform where they can explore the menu, locate restaurants and access ordering and customer-support services.

The existing Nando's South Africa website already provides online menu information and ordering functionality, meaning that these features are important components of the organization's digital customer experience (Nando's South Africa, 2026).

Website Goals

The proposed website should:

1. Provide customers with easy access to Nando's menu.

2. Allow customers to find nearby Nando's restaurants.

3. Provide online ordering functionality.

4. Promote Nando's products and promotions.

5. Provide information about the organization and its history.

6. Promote the Nando's PERi-PERi brand.

7. Provide customer-support information.

8. Promote the Nando's loyalty programme.

9. Provide access to contact information.

10. Create a consistent and recognisable Nando's brand experience.

Current website analysis

Unlike a fictional organisation without an existing website, Nando's already has an established online presence. The official South African website provides menu information, online ordering and other customer services (Nando's South Africa, 2026).

3.1 Strengths

One strength of the existing website is that it provides direct access to the Nando's menu and online ordering functionality. Customers can use the website to explore food options and place orders (Nando's South Africa, 2026).

Another strength is the restaurant locator. Customers can search for Nando's restaurants and identify services available at different branches, including dine-in, collection, delivery and drive-through services at selected locations (Nando's South Africa, 2026).

The website also provides a help section containing information about food, vouchers, online ordering and other common customer questions. This can reduce the need for customers to contact the organisation for basic information (Nando's South Africa, 2026).

The organisation also has a strong brand identity. Its use of PERi-Red, black, distinctive typography and South African-inspired design elements creates a recognisable visual identity (Nando's South Africa, 2026).

3.2 Weaknesses and Areas for Improvement

Although the website provides many useful services, there are opportunities to improve the overall user experience.

First, the website contains a significant amount of information and functionality. New users may therefore benefit from a simpler navigation structure that makes the most important actions immediately visible.

Second, the website relies heavily on food imagery and promotional content. Images should be properly optimised to ensure that visual content does not negatively affect loading performance.

Third, the website should continue prioritising mobile usability. Google recommends responsive web design because it allows websites to adapt to different devices while maintaining the same page content and URLs (Google Search Central, 2012).

Finally, accessibility should be considered throughout the design. The World Wide Web Consortium recommends that websites follow accessibility principles that make content perceivable, operable, understandable and robust (W3C, 2024).

Proposed website features and functionality

The proposed website will contain the following major sections.

4.1 Homepage

The homepage will provide customers with an immediate introduction to Nando's.

It will include:

* Nando's logo.
* Main navigation menu.
* Featured food images.
* Current promotions.
* Call-to-action buttons.
* "Order Now" button.
* "Find a Restaurant" button.
* Featured menu items.
* Links to the loyalty programme.

The homepage should immediately communicate the Nando's brand and direct customers towards the most important functions.

4.2 About Nando's

The About page will provide information about the organisation.

It will include:

* Nando's history.

* The story behind the brand.

* Information about PERi-PERi.

* South African heritage.

* Brand values.

* Restaurant culture.

Nando's describes its first restaurant as opening in Rosettenville, Johannesburg, in 1987, making its South African origins an important part of the organisation's story (Nando's South Africa, 2026).

4.3 Menu

The Menu page will allow customers to explore available food.

Possible categories include:

* Chicken.

* Burgers.

* Wraps.

* Bowls.

* Sides.

* Drinks.

* Desserts.

* Sharing meals.

Each product should include:

* Product name.

* Description.

* Photograph.

* Price.

* Spice level where appropriate.

* Nutritional/allergen information where available.

* Add-to-order functionality.

4.4 Online Ordering

Customers should be able to:

1. Select their preferred restaurant.

2. Choose delivery or collection where available.

3. Select food.

4. Add items to a basket.

5. Review their order.

6. Complete the required checkout information.

7. Receive confirmation.

The official Nando's South Africa platform already supports online ordering, collection and delivery information (Nando's South Africa, 2026).

4.5 Restaurant Locator

The Restaurant Locator will allow customers to find nearby restaurants.

It should provide:

* Search by location.

* Restaurant address.

* Telephone number.

* Opening hours.

* Available services.

* Directions.

* Delivery availability.

* Collection availability.

* Drive-through availability where applicable.

Nando's official store locator demonstrates the usefulness of providing branch-specific information and service filters (Nando's South Africa, 2026).

4.6 Promotions

A dedicated promotions section will display:

* Current specials.

* Limited-time offers.

* Meal deals.

* Seasonal campaigns.

* Competitions.

Promotions should have clear expiry dates where applicable so customers know whether an offer is still active.

4.7 PERi-PERi Products

Nando's also sells PERi-PERi products for customers to use at home. These include PERi-PERi sauces, PERinaise and seasonings (Nando's South Africa, 2026).

The website can therefore include a section dedicated to:

* Sauces.

* PERinaise.

* Seasonings.

* Other grocery products.

* Product descriptions.

4.8 Loyalty Programme

The website can promote Nando's loyalty programme and direct customers towards registration and rewards.

The official platform currently promotes PERi-Perks through the Nando's app (Nando's South Africa, 2026).

4.9 Contact and Help

The Contact section will provide:

* Contact form.

* Telephone number.

* Customer-support information.

* Frequently Asked Questions.

* Social media links.

* General enquiries.

Nando's South Africa currently provides an online contact form requesting information such as name, email address, telephone number and message (Nando's South Africa, 2026).

Conclusion

Nando's is a strong organisation for a website project because it has a recognisable brand identity, a large customer base and a range of digital services that can be incorporated into a website proposal. The organisation's history is strongly connected to South Africa, while its PERi-PERi products provide a distinctive brand identity (Nando's South Africa, 2026).

The proposed website will focus on improving the customer experience by making important information such as menus, restaurant locations, promotions, online ordering, loyalty services and customer support easy to access. The website will use responsive design so that customers can access it on mobile phones, tablets and desktop computers. Accessibility principles based on WCAG 2.2 will also be considered to make the website more inclusive (W3C, 2024).

Overall, the proposed website will support Nando's digital presence while maintaining the organisation's distinctive South African identity and providing customers with a convenient and engaging online experience.
